

Skill-Adapter Case Demo

README

- 🏆 环境适配 (Context-Aware): 消除公共 Skill 与私有工作空间 (Workspace) 之间的"信息差"。
- 会话进化 (Session-Driven): 自动捕获用户在对话中对 Skill 的修正，并将其固化为本地 Patch。
- 效能闭环 (Evaluation-Based): 所有的改进必须通过量化数据 (成本、轮数、调用次数) 来证明其价值。

- 🔗 <https://github.com/yangjing/skill-adapter>
- npm install -g @yangjing/skill-adapter
-

SA Agent Evolution Process

✓ SA Agent evolution analysis complete
✓ Generated 3 recommendation(s)

■ EVOLUTION RECOMMENDATIONS

● [HIGH] Recommendation #1

Title: Add browser automation tools for QA testing
Type: env_adaptation
Confidence: 95%

Description:
The skill is for QA testing web applications but lacks the essential browser tools needed for actual testing. Must add Playwright MCP for screenshot capture, navigation, and interaction. Also add WebFetch for direct page content retrieval. Without these, the skill cannot perform its core function of testing web apps and capturing screenshots.

Suggested Content:
allowed-tools:
- Bash
- Read
- Write
- AskUserQuestion
- WebSearch
- WebFetch
- Playwright

● [HIGH] Recommendation #2
```

```

● [HIGH] Recommendation #2

Title: Add npm workspace detection and test runner integration
Type: env_adaptation
Confidence: 90%

Description:
Workspace uses npm. The skill should detect available test scripts (npm run test, npm run test:e2e, npm run test:ui), package.json test configurations, right, Jest, Vitest). This enables the skill to run existing test suites and augment them rather than starting from scratch.

Suggested Content:
## Workspace Test Discovery (run after preamble)

```bash
Detect npm project and test configuration
_PKG_JSON=$(find . -maxdepth 1 -name 'package.json' -type f 2>/dev/null | head -1)
if [-n "$_PKG_JSON"]; then
 _TEST_CMDS=$(cat package.json | grep -E '"test' | head -5 | true)
 _HAS_CYPRESS=$([-d "cypress"] || [-f "cypress.config.js"] || [-f "cypress.config.ts"] && echo "yes" || echo "no")
 ... (truncated)

```

```

● [MEDIUM] Recommendation #3

Title: Inject direct communication style into reporting section
Type: style_injection
Confidence: 85%

Description:
User prefers direct communication. The skill's output should be concise, structured, and avoid hedging language in QA reports. Add explicit guidance for

Suggested Content:
Report Format (Direct Style)

Structure findings in this exact order:
1. **Health Score**: X/100 (single number, no hedging)
2. **Critical Issues**: Bullet list with severity (P0/P1/P2), repro steps in imperative tense
3. **Screenshots**: Labeled with viewport size and timestamp
4. **Recommendations**: Optional, only if obvious fix

... (truncated)

DANGEROUS OPERATIONS

---

[MEDIUM] network\_request

Description: Network request detected

Location: Line 176

[MEDIUM] network\_request

Description: Network request detected

Location: Line 375

[LOW] Session File Management Race Condition

Description: Session files created with PPID in filename under ~/.gstack/sessions. If directory permissions are misconfigured, could allow session hijacking or DoS via symlink attacks.

Location: Line 17

[MEDIUM] Unquoted Variable in Find Loop

Description: The loop 'for \_PF in \$(find...)' does not properly quote the find results. Files with spaces or special characters could cause unexpected behavior or command injection if combined with unsafe usage.

Location: Line 30

[LOW] Potential Path Traversal in Configuration Reads

Description: gstack-config get commands read from user home directory. If ~/.claude/skills/gstack/bin/gstack-config doesn't properly validate paths, could be vulnerable to path traversal via environment variables.

Location: Line 19

---

PERMISSION ISSUES

---

[MEDIUM] excessive\_permission

Resource: file system

Description: Unrestricted file system access detected

Recommended: Scope to specific directories

[HIGH] unsafe\_pattern

Resource: sensitive files

Description: Skill may access sensitive file pattern: credentials

[HIGH] unsafe\_pattern

Resource: sensitive files

Description: Skill may access sensitive file pattern: password

```
592 [HIGH] unsafe_pattern
593 Resource: user input
594 Description: User input may be used in sensitive operations without
validation
595
596 [LOW] Proactive Skill Suggestion Gate Bypass
597 Resource: Proactive Skill Suggestion Gate Bypass
598 Description: PROACTIVE flag check is informational only - relies on LLM
following instructions rather than enforcement. Could potentially be bypassed
via prompt injection.

603
604 🚫 EXTREME - Security red flags detected, do not install
605
606
607 RECOMMENDATIONS
608
609
610 1. Implement strict input validation for any user-provided URLs before
WebSearch or testing operations
611 2. Quote all shell variables properly, especially in the find loop at line
30: use 'while IFS= read -r -d "" _PF' pattern
612 3. Move analytics logging after explicit telemetry consent to align with
documented privacy claims
613 4. Add path validation to ensure all file operations stay within intended
directories (~/.gstack, project root)
614 5. Consider sandboxing the QA testing operations to prevent exfiltration of
internal application data
615 6. Add timeout and rate limiting to WebSearch usage to prevent abuse
616 7. Sanitize or hash repository/branch names before logging to avoid
information disclosure
617 8. Document the security model: QA tools inherently need broad access, users
should understand what data flows where
618
619
620 NEXT STEPS
621
622
623 1. sa scan <skill> --repair
624 2. sa scan <skill> --repair --apply
625 3. Re-run scan after reviewing the repaired output

686 📖 Version History: qa-only
687
688 📦 Version: 1.1.0
689 📅 Date: 3/28/2026 3:33:07 PM
690 🆔 ID: evo_1774683187294_fswH00tfc
691 📝 Changes:
692 • [env_adaptation] The skill is designed for QA testing web applications but
693 lacks browser automation capabilities. Playwright MCP tools are essential for
694 navigating, interacting with, and capturing screenshots of web applications
695 during testing.
696 • [env_adaptation] Detect and leverage existing test configurations in the
697 workspace. Check package.json for test scripts, look for vitest/jest config,
698 and run existing test suites to identify failures as part of the QA report.
699 • [style_injection] User prefers direct communication style. The current
700 AskUserQuestion format is verbose with multiple layers of context. Simplify to
701 essential information only while maintaining the recommendation clarity.
